General introduction

- This dataset is a csv file containing data collected during a systematic literature review on all peer-reviewed articles studying the Origin or Destination of movers to and from gentrifying neighbourhoods. The data is part of Kyri Maaiké Joey Janssen's PhD thesis, and the data was used for the following peer-reviewed article: <https://doi.org/10.1111/tesg.12581>.

Methodological information

- The data was collected by analysing references and categorizing the references by filling in the following google forms document:
https://docs.google.com/forms/d/1UJJbwK_IWCsBo2XerYsqu_YWj1ACFvQcfjSvNI0evZE/edit
- The purpose of this dataset was to gain quantitative insights in the current state of affairs regarding the academic literature on the origin and destination of gentrification-induced moves

Data specific information

- Row number R: row number
 - ID: unique article identifier
- Topic: if article captures trajectories of gentrifiers or displacees
- Type gentri_new: The type of gentrification studied – classical, institutional, unclear
- Concept_new: the neighborhood transformation studied – Gentrification, Urban restructuring, state-led gentrification
- Author: author(s)
- Journal: Journal
- Publication data: year of publication
- Methodology: type of methodology: qualitative, quantitative, mixed methods > with explanations
- Method_new: type of methodology: qualitative, quantitative, mixed methods > without explanations
- Data ownership_n: indicating if data used is primary or secondary data
- Time data_n: indicating if study was cross-sectional, time trend or longitudinal
- Quant meth_n: what type of quantitative methods were used
- Qual meth_n: what type of qualitative methods were used
- Context scale: What is the context of analysis? To what spatial extent are the claims being made. – National, sub-national, metropolitan, inner-city, neighborhood
- Administrative category: The geo-reference; at what spatial scale is the analysis conducted. – National, sub-national, municipality, metropolitan, district, neighborhood, census tract, statistical area, residential units
- Unit_new: unit of analysis – space, people

- Extent movements: the scale at which the residential moves are studied – national, inter-urban, metropolitan, intra-urban, within neighborhood
- Country: country of analysis
- Country NEW: countries classified according to region
- Number cities: number of cities studied in analysis
- Cities: the cities studies in analysis
- Segregation: conclusions authors have made regarding segregation – increase in ethnic segregation, increase in ethnic and income segregation, increase in income segregation, desegregation
- Origin: identified origin location of gentrifier
- Destination: identified destination location of displace
- Phase: phase of gentrification studied
- ➔ Additional information regarding the variables can be found in the [google forms document](#)
