7  
8    **Fig. S1** | Air temperature ( $T_{air}$ ) measured 2 meters above the ground surface: (a), (b), (c), and (d) are  
9    half-hourly mean values in spring, summer, autumn, and winter, respectively; (e) shows diel-scale  
10   mean values from 2014 to 2018.

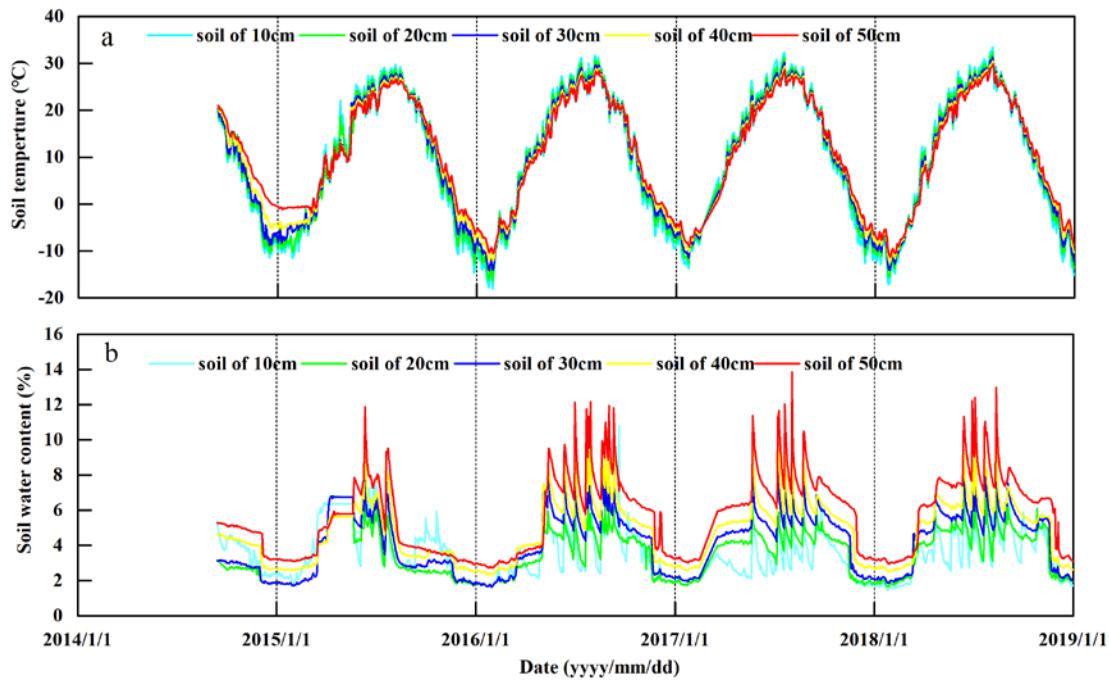

11

12 **Fig. S2** | Net radiation ( $R_n$ ) measured 2 meters above the ground surface: (a), (b), (c),  
 13 and (d) are half-hourly mean values in spring, summer, autumn, and winter,  
 14 respectively; (e) shows diel mean values from 2014 to 2018.

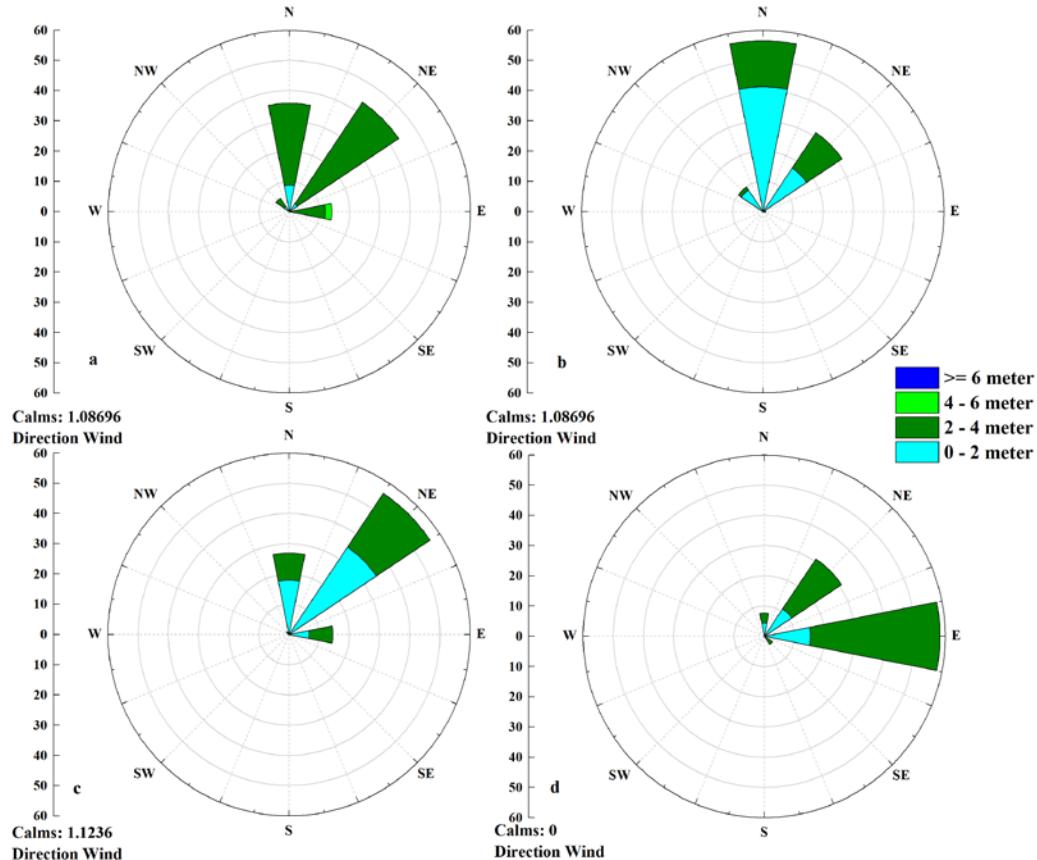

15

16 **Fig. S3 |** Soil heat flux (SHF) at depth of 5 cm and 10 cm: (a), (b), (c), and (d) are half-  
 17 hourly mean values in spring, summer, autumn, and winter, respectively; (e) shows diel  
 18 mean values from 2014 to 2018.

19

20 **Fig. S4** | Soil temperature ( $T_{\text{soil}}$ ) and soil water content (SWC) at depths of 10, 20, 30,  
21 40, and 50 cm from 2014 to 2018.

22

23 **Fig. S5** | Diel mean of wind speed and direction between 2015 and 2018: (a) is spring,

- 24 (b) is summer, (c) is autumn and (d) is winter. Note the direction of wind means the  
25 direction wind blows *from*.

26 Table S1 | Correlation coefficients (Pearson's  $r$ ) between NEE ( $r_{\text{NEE}}$ ), GPP ( $r_{\text{GPP}}$ ) and  $R_{\text{ec}}$  ( $r_{\text{Rec}}$ ) and the key environmental factors. Based on  
 27 seasonal timescales, N represents the sample size. Abbreviations:  $T_{\text{air}}$ , air temperature;  $R_n$ , net solar radiation; SHF, soil heat flux; SWC, soil water  
 28 content;  $T_{\text{soil}}$ , soil temperature. \*\* Means  $p < 0.01$ ; \* means  $p < 0.05$ ;  $r$  values are for the relationship between NEE, GPP and  $R_{\text{ec}}$  and environment  
 29 factors.

Environment factors	CO <sub>2</sub> rate																2014-2018			
	Spring				Summer				Autumn				Summer				2014-2018
