Eu.Gen.16	Info	Responsible for this document: EULYNX Project Management Office <a href="http://www.eulynx.eu">www.eulynx.eu</a>	
Eu.Gen.17	Info	Copyright EULYNX Partners All information included or disclosed in this document is licensed under the European Union Public Licence EUPL, Version 1.1.	
Eu.Gen.3	Head	<b>1.3 Purpose</b>	
Eu.Gen.4	Info	The purpose of the document is the specification of generic requirements for the development of the EULYNX System. The generic requirements complement the specific interface and subsystem requirements.	
Eu.Gen.2	Info	This document describes: <ul style="list-style-type: none"><li>• generic functional requirements for an EULYNX field element Subsystem</li><li>• generic functional requirements for the interface SCI-XX between an EULYNX field element Subsystem and the Subsystem - Electronic Interlocking</li><li>• generic functional requirements for the interface SDI-XX between an EULYNX field element Subsystem and Subsystem - Maintenance and Data Management</li><li>• generic functional requirements for the interface SMI-XX between an EULYNX field element Subsystem and Subsystem - Maintenance and Data Management</li><li>• generic functional requirements for the interface SCI-XX between an adjacent system and the Subsystem - Electronic Interlocking which are describing only the interface parts of each communication partner</li></ul>	
Eu.Gen.18	Info	This document is intended for the following users: <ul style="list-style-type: none"><li>• safety authorities</li><li>• infrastructure managers</li><li>• safety assessors</li><li>• signalling system suppliers</li><li>• validators</li></ul>	
Eu.Gen.19	Info	This document is the basis for the implementation by the supplier and for approval by the infrastructure manager.	
Eu.Gen.20	Head	<b>1.4 Applicable standards and regulations</b>	
Eu.Gen.21	Info	A list of applicable standards and regulations used in EULYNX is listed in the EULYNX Reference Document List [Eu.Doc.12].	
Eu.Gen.22	Head	<b>1.5 Applicable documents</b>	
Eu.Gen.23	Info	The current versions of documents used as input or related to this document are listed in the EULYNX Documentation Plan [Eu.Doc.11]. The relationships between the documents are displayed in the Appendix A1 Documentation plan and structure [Eu.Doc.11_A1].	
Eu.Gen.24	Head	<b>1.6 Terms and abbreviations</b>	
Eu.Gen.25	Info	The terms and abbreviations are listed in the EULYNX Glossary [Eu.Doc.9].	
Eu.Gen.376	Head	<b>1.7 Variability management</b>	
Eu.Gen.377	Info	This document describes the generic functions of the EULYNX System. Variability management is not used in this document. The specific applicability of requirements is captured in individual Requirements specifications.	
Eu.Gen.26	Head	<b>1.8 Definition of object types</b>	
Eu.Gen.27	Info	The following definition for object types is applied in this document:	
Eu.Gen.28	Info	• "Req" - This denotes a mandatory requirement.	
Eu.Gen.29	Info	• "Info" - This denotes additional information to help understand the specification. These objects do not specify any additional requirements.	
Eu.Gen.30	Info	• "Head" - This denotes chapter headings.	
Eu.Gen.31	Head	<b>1.9 Modelling</b>	
Eu.Gen.32	Info	The section "Functional requirements specification" follows a model based systems engineering process using Systems Modelling Language (SysML) and defines the functional system requirements for the EULYNX field element Subsystem in stimulus-response form. Furthermore the information objects (stimuli and responses) exchanged over the interfaces of the EULYNX field element Subsystem, Subsystem - Electronic Interlocking and the adjacent systems are defined.	
Eu.Gen.33	Info	The diagrams presented in this document are modelled in SysML [SysML].	
Eu.Gen.34	Info	The rules for the interpretation of the model based parts of specification are defined in [Eu.Doc.29].	
Eu.Gen.35	Info	In chapter 3 "Functional requirements specification" the functional system requirements, defined in the form of a SysML model in the PTC Integrity Modeler are depicted as a surrogate of this model in the form of DOORS-objects.	

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.36	Info	A requirement thereby consists of the respective SysML model element, for instance a SysML diagram, and if necessary an additional extension of the requirement.	
Eu.Gen.37	Info	In the column "Requirement Part 1" the particular SysML model element is depicted and in the column "Requirement Part 2" the corresponding extension of the definition is given. The stated object type normally applies both to "Requirement Part 1" and to "Requirement Part 2".	
Eu.Gen.38	Info	There are requirements with type "Req" given, where the column "Requirement Part 2" or a part of it is provided with the heading "Information". In this case, the defined type only applies to the column "Requirement Part 1" and the part of "Requirement Part 2", which is not labelled as "Information".	
Eu.Gen.48	Head	<b>2 Conditions of use</b>	
Eu.Gen.369	Info	The specifications defined in this document shall follow the requirements of the EULYNX System Architecture Specification [Eu.Doc.16].	
Eu.Gen.49	Head	<b>3 Functional requirements specification</b>	
Eu.Gen.113	Head	<b>3.1 EULYNX field element Subsystem</b>	
Eu.Gen.3272	Head	<b>3.1.1 Definition of time values</b>	
Eu.Gen.3273	Req	Con_t_Ini_Def_Delay	The variable delay time Mem_t_Ini_Delay shall expire before the connection to the Subsystem - Maintenance and Data Management is going to be established. When the PDI connection is interrupted because of an interruption of the safe communication protocol, the delay time Mem_t_Ini_Delay := Con_t_Ini_Def_Delay shall be used for establishing the communication with Subsystem - Maintenance and Data Management. The configuration parameter Con_t_Ini_Def_Delay may be chosen in the interval [8 s, 20 s].
Eu.Gen.3274	Req	Con_t_Ini_Max	Con_t_Ini_Max represents a configurable maximum value of the delay time Mem_t_Ini_Delay. It shall be chosen in an interval of 600 s <= Con_t_Ini_Max <= 6000 s. If the infrastructure manager doesn't define a project specific value, the value shall be Con_t_Ini_Max := 3600 s.
Eu.Gen.3275	Req	Con_t_Ini_Step	In case of re-establishing connection to Subsystem - Maintenance and Data Management (due to unsuccessful loading of Engineering Data or not established PDI connection), the configurable parameter Con_t_Ini_Step represents the value by which the variable delay time Mem_t_Ini_Delay shall be increased. Con_t_Ini_Step shall be chosen with an interval of 10 s <= Con_t_Ini_Step <= 60 s. If the Operator doesn't define a project specific value, the value shall be Con_t_Ini_Step := 30 s.
Eu.Gen.158	Req	Con_tmax_Booting	Booting shall be completed within Con_tmax_Booting := 120 s after detecting that the operating voltage has reached the required level for operation.
Eu.Gen.3276	Req	Mem_t_Ini_Delay	Mem_t_Ini_Delay stores the variable delay time. This depends on the system status. After entering the essential state INITIALISING, the time Mem_t_Ini_Delay shall expire before the communication to Subsystem - Maintenance and Data Management is allowed to start.
Eu.Gen.159	Req	Con_tmax_DataInstallation	After the termination of loading the Engineering Data and Configuration Data from Subsystem - Maintenance and Data Management, the installation of the data shall be completed on the particular EULYNX field element Subsystem within Con_tmax_DataInstallation := 60 s. If the configured period for installation Con_tmax_DataInstallation is exceeded, a diagnostic telegram shall be sent.
Eu.Gen.160	Req	Con_tmax_DataTransmission	If the transmission of Engineering Data and Configuration Data from Subsystem - Maintenance and Data Management cannot be completed within Con_tmax_DataTransmission, data update for Engineering Data and Configuration Data shall be restarted. The default value for the configurable period Con_tmax_DataTransmission is 300 s.
Eu.Gen.3624	Req	Con_tmax_PDI_Connection	If the establishment of the PDI connection, measured from the sending of Cd_PDI_Version_Check to the receipt of Msg_Initialisation_Completed, is not completed within Con_tmax_PDI_Connection, the safe communication shall be terminated. A diagnostic message shall be issued. The Safe communication is then re-established. The default value for Con_tmax_PDI_Connection is 20 s.
Eu.Gen.161	Req	Con_tmax_Response_MDM	If the up-to-dateness of Configuration Data and Engineering Data from Subsystem - Maintenance and Data Management cannot be confirmed within Con_tmax_Response_MDM := 10 s, an attempt shall be made to establish a connection between Subsystem - Electronic Interlocking and EULYNX field element Subsystem.
Eu.Gen.162	Head	<b>3.1.2 General structure</b>	
Eu.Gen.3268	Head	<b>3.1.2.1 Definition</b>	
Eu.Gen.163	Info	F_EST_EfeS	The logical component F_EST_EfeS defines the essential states of the EULYNX field element Subsystem. These are used for the definition of the use case scenarios. This is an abstract definition which is refined by the logical components F_EST_EfeS_SR, F_SCI_EfeS_Sec_SR and F_SMI_EfeS_SR.

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.200	Info	<p>F_EST_EfeS - Events [EST_EfeS IBD 1]</p> <pre> graph TD     FESTEfeS["F_EST_EfeS"] --&gt; T1PowerOn[T1_Power_On_Detected]     FESTEfeS --&gt; T2PowerOff[T2_Power_Off_Detected]     FESTEfeS --&gt; T3Reset[T3_Reset]     FESTEfeS --&gt; T4Booted[T4_Booted]     FESTEfeS --&gt; T5SILNotFulfilled[T5_SIL_Not_Fulfilled]     FESTEfeS --&gt; T6DataInvalid[T6_Data_Invalid]     FESTEfeS --&gt; T7InvalidOrMissingBasicData[T7_Invalid_Or_Missing_Basic_Data]     FESTEfeS --&gt; T8DataInstallationComplete[T8_Data_Installation_Complete]     FESTEfeS --&gt; T9PDIConnectionEstablished[T9_PDI_Connection_Established]     FESTEfeS --&gt; T10SCPConnectionTerminated[T10_SCP_Connection_Terminated]     FESTEfeS --&gt; T11DataTransmissionTimeout[T11_Data_Transmission_Timeout]     T12TerminateSCPConnection[T12_Terminate SCP_Connection] --&gt; Out[ ]   </pre>	
Eu.Gen.205	Info	T1_Power_On_Detected	The FlowPort T1_Power_On_Detected indicates that the voltage has reached the required range for operation.
Eu.Gen.206	Info	T2_Power_Off_Detected	The FlowPort T2_Power_Off_Detected indicates that voltage has left the required range for operation.
Eu.Gen.207	Info	T3_Reset	The FlowPort T3_Reset indicates that a reset command was received.
Eu.Gen.208	Info	T4_Booted	<p>The FlowPort T4_Booted indicates that the booting process was completed successfully.</p> <p>T4_Booted shall be triggered under the following conditions:</p> <ul style="list-style-type: none"> <li>- all conditions for the required Safety Integrity Level are fulfilled</li> <li>- the Basic Data is valid and complete</li> <li>- the Safe communication protocol connection is disconnected</li> <li>- the time synchronisation was initiated according to the specification in [Eu.Doc.76], if the subsystem MDM and the SMI functionality are used</li> </ul>
Eu.Gen.209	Info	T5_SIL_Not_Fulfilled	The FlowPort T5_SIL_Not_Fulfilled indicates that at least one condition for the required Safety Integrity Level is not fulfilled.
Eu.Gen.210	Info	T6_Data_Invalid	The FlowPort T6_Data_Invalid indicates, that the EULYNX field element Subsystem detected that the transmitted data was not transmitted correctly.
Eu.Gen.211	Info	T7_Invalid_Or_Missing_Basic_Data	The FlowPort T7_Invalid_Or_Missing_Basic_Data indicates a failed validity check of Basic Data on the system data interface to Basic Data identifier.
Eu.Gen.212	Info	T8_Data_Installation_Complete	The FlowPort T8_Data_Installation_Complete indicates that the installation of new Engineering Data and Configuration Data is completed.
Eu.Gen.213	Info	T9_PDI_Connection_Established	The FlowPort T9_PDI_Connection_Established indicates that the Process Data Interface protocol connection to Subsystem - Electronic Interlocking is established successfully.
Eu.Gen.202	Info	T10_SCP_Connection_Terminated	The FlowPort T10_SCP_Connection_Terminated indicates that the Safe communication protocol connection to Subsystem - Electronic Interlocking is terminated.
Eu.Gen.203	Info	T11_Data_Transmission_Timeout	The FlowPort T11_Data_Transmission_Timeout indicates that the EULYNX field element Subsystem recognizes that the maximum configurable time Con_tmax_DataTransmission of transmitting Engineering Data and Configuration Data has run out.
Eu.Gen.204	Info	T12_Terminate SCP_Connection	The FlowPort T12_Terminate SCP_Connection indicates that the EULYNX field element Subsystem initialises the termination of Safe communication protocol connection to Subsystem - Electronic Interlocking.

Eu.Gen.3737	Req	D23_Con_Checksum_Data_Used	<p>The FlowPort D23_Con_Checksum_Data_Used provides configuration values whether the CSS is used and checked during initialisation.</p> <p>The following values are permitted:</p> <ul style="list-style-type: none"> <li>- True: CSS is used</li> <li>- False: CSS is not used</li> </ul>
Eu.Gen.3738	Req	D2_Con_tmax_PDI_Connection	The FlowPort D2_Con_tmax_PDI_Connection provides the time value Con_tmax_PDI_Connection.
Eu.Gen.3739	Req	D3_Con_PDI_Version	The FlowPort D3_Con_PDI_Version provides the configured PDIVer.
Eu.Gen.3740	Req	D4_Con_Checksum_Data	The FlowPort D4_Con_Checksum_Data provides the configured CSS.
Eu.Gen.3741	Req	D50_PDI_Connection_State	The FlowPort D50_PDI_Connection_State provides the status of the PDI connection.
Eu.Gen.3742	Req	DT13_Checksum_Data	The FlowPort DT13_Checksum_Data belongs to T13_Msg_PDI_Version_Check.
Eu.Gen.3743	Req	DT13_Result	The FlowPort DT13_Result belongs to T13_Msg_PDI_Version_Check.
Eu.Gen.3744	Req	DT7_PDI_Version	The FlowPort DT7_PDI_Version belongs to T7_Cd_PDI_Version_Check.
Eu.Gen.3802	Req	T10_SCP_Connection_Terminated	The FlowPort T10_SCP_Connection_Terminated represents the event of the terminated SCP connection.
Eu.Gen.3803	Req	T12_Terminate_SCP_Connection	The FlowPort T12_Terminate_SCP_Connection represents the event to terminate the SCP connection.
Eu.Gen.3804	Req	T13_Msg_PDI_Version_Check	The FlowPort T13_Msg_PDI_Version_Check refines the FlowProperty Msg_PDI_Version_Check.
Eu.Gen.3805	Req	T14_Msg_Start_Initialisation	The FlowPort T14_Msg_Start_Initialisation refines the FlowProperty Msg_Start_Initialisation.
Eu.Gen.3806	Req	T15_Msg_Initialisation_Completed	The FlowPort T15_Msg_Initialisation_Completed refines the FlowProperty Msg_Initialisation_Completed.
Eu.Gen.3807	Req	T20_Protocol_Error	<p>The FlowPort T20_Protocol_Error represents the event of a protocol error. The following events are possible as defined in [Eu.Doc.16].</p> <ul style="list-style-type: none"> <li>- incomplete activation</li> <li>- improper message sequence</li> <li>- message at improper instant case</li> </ul>

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.3808	Req	T21_Formal_Telegram_Error	The FlowPort T21_Formal_Telegram_Error represents the event of a formal telegram error. The following events are possible as defined in [Eu.Doc.16]. <ul style="list-style-type: none"><li>- deviating message type</li><li>- deviating protocol type</li><li>- message length</li><li>- unknown sender or receiver identifier</li></ul>
Eu.Gen.3809	Req	T22_Content_Telegram_Error	The FlowPort T22_Content_Telegram_Error represents the event of a content telegram error. The following events are possible as defined in [Eu.Doc.16]. <ul style="list-style-type: none"><li>- improper value</li><li>- locally improper value</li><li>- improper combination of values</li></ul>
Eu.Gen.3810	Req	T5 SCP_Connection_Established	The FlowPort T5 SCP_Connection_Established represents the event of the established SCP connection.
Eu.Gen.3811	Req	T6_Establish_SCP_Connection	The FlowPort T6_Establish_SCP_Connection represents the event for the SCP to establish the SCP connection.
Eu.Gen.3812	Req	T7_Cd_PDI_Version_Check	The FlowPort T7_Cd_PDI_Version_Check refines the FlowProperty Cd_PDI_Version_Check.
Eu.Gen.3813	Req	T8_Cd_Initialisation_Request	The FlowPort T8_Cd_Initialisation_Request refines the FlowProperty Cd_Initialisation_Request.

Eu.Gen.3650	Req	D3_Con_PDI_Version	The FlowPort D3_Con_PDI_Version provides the configured PDIver.
Eu.Gen.3651	Req	D4_Con_Checksum_Data	The FlowPort D4_Con_Checksum_Data provides the configured CSS.
Eu.Gen.3652	Req	D50_PDI_Connection_State	The FlowPort D50_PDI_Connection_State provides the status of the PDI connection.
Eu.Gen.3653	Req	DT13_Checksum_Data	The FlowPort DT13_Checksum_Data belongs to T13_Msg_PDI_Version_Check.
Eu.Gen.3654	Req	DT13_Result	The FlowPort DT13_Result belongs to T13_Msg_PDI_Version_Check.
Eu.Gen.3655	Req	DT7_PDI_Version	The FlowPort DT7_PDI_Version belongs to T7_Cd_PDI_Version_Check.
Eu.Gen.3718	Req	T10_SCP_Connection_Terminated	The FlowPort T10_SCP_Connection_Terminated represents the event of the terminated SCP connection.
Eu.Gen.3719	Req	T11_PDI_Connection_Established	
Eu.Gen.3720	Req	T12_Terminate_SCP_Connection	The FlowPort T12_Terminate_SCP_Connection represents the event to terminate the SCP connection.
Eu.Gen.3721	Req	T13_Msg_PDI_Version_Check	The FlowPort T13_Msg_PDI_Version_Check refines the FlowProperty Msg_PDI_Version_Check.
Eu.Gen.3722	Req	T14_Msg_Start_Initialisation	The FlowPort T14_Msg_Start_Initialisation refines the FlowProperty Msg_Start_Initialisation.
Eu.Gen.3723	Req	T15_Msg_Initialisation_Completed	The FlowPort T15_Msg_Initialisation_Completed refines the FlowProperty Msg_Initialisation_Completed.
Eu.Gen.3724	Req	T17_PDI_Connection_Closed	

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.3725	Req	T18_Not_Ready_For_PDI_Connection	
Eu.Gen.3726	Req	T1_Ready_For_PDI_Connection	
Eu.Gen.3727	Req	T20_Protocol_Error	The FlowPort T20_Protocol_Error represents the event of a protocol error. The following events are possible as defined in [Eu.Doc.16]. - incomplete activation - improper message sequence - message at improper instant case
Eu.Gen.3728	Req	T21_Formal_Telegram_Error	The FlowPort T21_Formal_Telegram_Error represents the event of a formal telegram error. The following events are possible as defined in [Eu.Doc.16]. - deviating message type - deviating protocol type - message length - unknown sender or receiver identifier
Eu.Gen.3729	Req	T22_Content_Telegram_Error	The FlowPort T22_Content_Telegram_Error represents the event of a content telegram error. The following events are possible as defined in [Eu.Doc.16]. - improper value - locally improper value - improper combination of values
Eu.Gen.3730	Req	T5 SCP_Connection_Established	The FlowPort T5 SCP_Connection_Established represents the event of the established SCP connection.
Eu.Gen.3731	Req	T6_Start_Status_Report	
Eu.Gen.3732	Req	T7_Cd_PDI_Version_Check	The FlowPort T7_Cd_PDI_Version_Check refines the FlowProperty Cd_PDI_Version_Check.
Eu.Gen.3733	Req	T8_Cd_Initialisation_Request	The FlowPort T8_Cd_Initialisation_Request refines the FlowProperty Cd_Initialisation_Request.
Eu.Gen.3734	Req	T9_Status_Report_Completed

Eu.Gen.126	Info	Subsystem_MDM_D	Definition of the InformationFlow (by FlowSpecification) for the diagnostic data for the interface SDI-XX to Subsystem - Maintenance and Data Management.
Eu.Gen.127	Req	BaseDataReadable	Type: Enumeration  Status of the Basic_Data. The message shall be transmitted with the download of basic data.
Eu.Gen.128	Req	DataStatus_PR_ID1	Type: Enumeration  Result of the version check carried out by the Subsystem -

ID	Type	Requirement Part 1	Requirement Part 2
			Maintenance and Data Management indicating whether the PR_ID = 1 data version matches the latest version held in the Subsystem - Maintenance and Data Management. The message shall be transmitted as event triggered.
Eu.Gen.129	Req	DataStatus_PR_ID2	Type: Enumeration  Result of the version check carried out by the Subsystem - Maintenance and Data Management indicating whether the PR_ID = 2 data version matches the latest version held in the Subsystem - Maintenance and Data Management. The message shall be transmitted as event triggered.
Eu.Gen.130	Req	DeviceRevision	Type: String  General revision of the EULYNX field element Subsystem. Is given by manufacturer and includes hardware as well as software revision. The message shall be transmitted with the establishing of the connection.
Eu.Gen.131	Req	HardwareRevision	Type: String  Hardware revision level of the EULYNX field element Subsystem. The message shall be transmitted with the establishing of the connection.
Eu.Gen.132	Req	Identification	Type: String  Functional location of EULYNX field element Subsystem (e.g. DB Netz AG TP 1-3 from SAP R/3). If this attribute is not defined, it needs to be filled with Underscore (0x5F). The attribute shall be changeable by updating of Configuration Data.  The message shall be transmitted with the establishing of the connection.
Eu.Gen.133	Req	InterfaceRevision	Type: String  Version of the EULYNX field element Subsystem requirement specification which was used for development and production of the EULYNX field element Subsystem. For example the EULYNX field element Subsystem is developed and produced basically on version 1.6 (1.A), the InterfaceRevision has the value "1.6 (1.A)". The message shall be transmitted with the establishing of the connection.
Eu.Gen.134	Req	IsFailure	Type: Boolean  If no defined message in the residual list is applicable, "IsFailure" is applying as general fault indication. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.135	Req	IsTemperatureTooHigh	Type: Boolean  The EULYNX field element Subsystem is allowed to send the message "IsTemperatureTooHigh" according to the requirement of the manufacturer. It is information for the cases - Introduction of provision for damage limitation by maintenance or - Provision to increase availability or durability The manufacturer defines - place and type to determine temperature and - the limiting temperature value when the message shall be sent. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.136	Req	Manufacturer	Type: String  Name of manufacturer from EULYNX field element Subsystem. The message shall be transmitted with the establishing of the connection.
Eu.Gen.137	Req	ManufacturerSpecificMessage	Manufacturer specific diagnostic messages are allowed after they are agreed with the railway operator according to a process (e.g. failure counter of Safe communication protocol connection).  Note: The amount of messages is not limited but shall not replace other defined messages e.g Model, SerialNumber, OpStatus etc.
Eu.Gen.138	Req	MDM_InteractionStatus_Download	Type: Enumeration  Status of the interaction at the loading process. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.139	Req	Model	Type: String  Manufactures name of model from EULYNX field element Subsystem.

ID	Type	Requirement Part 1	Requirement Part 2
			This attribute is not allowed to be changed during the life time of device. The message shall be transmitted with the establishing of the connection.
Eu.Gen.140	Req	OpStatus	Type: Enumeration  For operation state. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.141	Req	PDIError	Type: Enumeration  In case of a fault on the PDI connection. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.142	Req	PDIStatus	Type: Enumeration  Status of PDI connection. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.143	Req	RevisionCounter	Type: Integer  Incremental counter to inform how often Configuration Data and Engineering Data of the EULYNX field element Subsystem has changed technically. The message shall be transmitted with the establishing of the connection.
Eu.Gen.144	Req	SafeCommunicationProtocolConnectionStatus	Type: Enumeration  Status of the safe communication protocol connection. When an underlying parameter changes, the message shall be generated and transmitted.
Eu.Gen.145	Req	SerialNumber	Type: String  Main identifier of EULYNX field element Subsystem. This identifier serves as an assignment characteristic for further replaceable components with their own serial number. This assignment shall be stored in the diagnostic configuration data of the Subsystem - Maintenance and Data Management. The message shall be transmitted with the establishing of the connection.
Eu.Gen.146	Req	SoftwareRevision	Type: String  Software revision level of the EULYNX field element Subsystem (not interface software revision). With an update of the software, the SoftwareRevision as well as DeviceRevision shall be changed.  The message shall be transmitted with the establishing of the connection.

Eu.Gen.3549	Req	DT7_PDI_Version	The FlowPort DT7_PDI_Version belongs to T7_Cd_PDI_Version_Check.
Eu.Gen.3600	Req	T10 SCP_Connection_Terminated	The FlowPort T10 SCP_Connection_Terminated represents the event of the terminated SCP connection.
Eu.Gen.3601	Req	T12_Terminate_SC_P_Connection	The FlowPort T12_Terminate_SC_P_Connection represents the event for the SCP to terminate the SCP connection.
Eu.Gen.3602	Req	T13_Msg_PDI_Version_Check	The FlowPort T13_Msg_PDI_Version_Check refines the FlowProperty Msg_PDI_Version_Check.
Eu.Gen.3603	Req	T14_Msg_Start_Initialisation	The FlowPort T14_Msg_Start_Initialisation refines the FlowProperty Msg_Start_Initialisation.
Eu.Gen.3604	Req	T15_Msg_Initialisation_Completed	The FlowPort T15_Msg_Initialisation_Completed refines the FlowProperty Msg_Initialisation_Completed.
Eu.Gen.3605	Req	T17_Status_Report_Completed	
Eu.Gen.3606	Req	T20_Protocol_Error	The FlowPort T20_Protocol_Error represents the event of a protocol error. The following events are possible as defined in [Eu.Doc.16]. - incomplete activation - improper message sequence - message at improper instant case

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.3607	Req	T21_Formal_Telegram_Error	The FlowPort T21_Formal_Telegram_Error represents the event of a formal telegram error. The following events are possible as defined in [Eu.Doc.16]. <ul style="list-style-type: none"><li>- deviating message type</li><li>- deviating protocol type</li><li>- message length</li><li>- unknown sender or receiver identifier</li></ul>
Eu.Gen.3608	Req	T22_Content_Telegram_Error	The FlowPort T22_Content_Telegram_Error represents the event of a content telegram error. The following events are possible as defined in [Eu.Doc.16]. <ul style="list-style-type: none"><li>- improper value</li><li>- locally improper value</li><li>- improper combination of values</li></ul>
Eu.Gen.3609	Req	T5 SCP_Connection_Established	The FlowPort T5 SCP_Connection_Established represents the event of the established SCP connection.
Eu.Gen.3610	Req	T6_Start_Status_Report	
Eu.Gen.3611	Req	T7_Cd_PDI_Version_Check	The FlowPort T7 Cd_PDI_Version_Check refines the FlowProperty Cd_PDI_Version_Check.
Eu.Gen.3612	Req	T8_Cd_Initialisation_Request	The FlowPort T8 Cd_Initialisation_Request refines the FlowProperty Cd_Initialisation_Request.

Eu.Gen.3886	Head	<b>4 RAMSS requirements</b>	
Eu.Gen.3888	Info	The requirements for reliability, availability, maintainability, safety and security shall be defined by national specifications.  Note: The RAMSS requirements will be specified in the EULYNX Specifications of RAMS requirements [Eu.Doc.13], to be developed at a later stage.	
Eu.Gen.3887	Head	<b>5 Technical requirements</b>	
Eu.Gen.3889	Info	Additional technical requirements shall be defined by national specifications.	
Eu.Gen.3890	Head	<b>5.1 Generic technical interface requirements</b>	
Eu.Gen.3891	Head	<b>5.1.1 Interface to the Point of Service – Signalling (PoS-Signalling)</b>	
Eu.Gen.3892	Req	The EULYNX field element Subsystem shall meet the requirements of the PoS-Signalling as defined in [Eu.Doc.100].	

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.3893	Head	<b>5.1.1.1 Communication profile VLAN at the PoS-Signalling</b>	
Eu.Gen.3894	Req	For the communication via SCI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a communication profile VLAN with the priority class 1 according to [Eu.Doc.100].	
Eu.Gen.3895	Req	For the communication with the service function Loading procedure via SMI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a communication profile VLAN with the priority class 3 according to [Eu.Doc.100].	
Eu.Gen.3896	Req	For the communication with the service function Time synchronisation via SMI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a communication profile VLAN with the priority class 4 according to [Eu.Doc.100].	
Eu.Gen.3897	Req	For the communication with the service function Diagnostics collector via SDI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a communication profile VLAN with the priority class 4 according to [Eu.Doc.100].	
Eu.Gen.3900	Head	<b>5.1.1.2 Reliability profile of the data network at the PoS-Signalling</b>	
Eu.Gen.3898	Req	For the communication via SCI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a reliability and availability of the data network of reliability and availability class 3 (RAC 3) according to [Eu.Doc.100].	
Eu.Gen.3899	Req	For the communication with the service function Loading procedure via SMI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a reliability and availability of the data network of reliability and availability class 2 (RAC 2) according to [Eu.Doc.100].	
Eu.Gen.3901	Req	For the communication with the service function Time synchronisation via SMI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a reliability and availability of the data network of reliability and availability class 1 (RAC 1) according to [Eu.Doc.100].	
Eu.Gen.3902	Req	For the communication with the service function Diagnostics collector via SDI-XX at the PoS-Signalling, the EULYNX field elements Subsystem shall provide a reliability and availability of the data network of reliability and availability class 2 (RAC 2) according to [Eu.Doc.100].	
Eu.Gen.3903	Req	For logical connections SCI-XX between two communication partners with required redundant connection via two PoS-Signalling, the data connections shall be guaranteed by the communication partners independently in accordance with the "hot standby with continuous data update" method.	
Eu.Gen.3904	Head	<b>5.1.1.3 KPI</b>	
Eu.Gen.3905	Req	The EULYNX field element Subsystem shall meet or expect the following KPI requirements at the PoS-Signalling during the communication on SCI-XX: • Data throughput according to CIR (committed information rate) with 15 kbit/s • Data throughput according to PIR (peak information rate) with 30 kbit/s	
Eu.Gen.3907	Req	The max. allowed delay between the sender at a PoS-Signalling and the receiver at a PoS-Signalling during the communication on SCI-XX is 50 ms. The max. allowed package loss rate between two PoS-Signalling during the communication on SCI-XX is < 1%.	
Eu.Gen.3906	Req	The EULYNX field element Subsystem shall meet or expect the following KPI requirements at the PoS-Signalling during the communication on SMI-XX for the service function Loading procedure: • Data throughput according to CIR (committed information rate) with 45 kbit/s • Data throughput according to PIR (peak information rate) with 2 Mbit/s	
Eu.Gen.3912	Req	The max. allowed delay between the sender at a PoS-Signalling and the receiver at a PoS-Signalling during the communication on SMI-XX for the service function Loading procedure is 250 ms. The max. allowed package loss rate between two PoS-Signalling during the communication on SMI-XX is < 5%.	
Eu.Gen.3911	Req	The EULYNX field element Subsystem shall meet or expect the following KPI requirements at the PoS-Signalling during the communication on SMI-XX for the service function Time synchronisation: • Data throughput according to CIR (committed information rate) with 30 kbit/s • Data throughput according to PIR (peak information rate) with 45 kbit/s	
Eu.Gen.3910	Req	The max. allowed delay between the sender at a PoS-Signalling and the receiver at a PoS-Signalling during the communication on SMI-XX for the service function Time synchronisation is 250 ms. The max. allowed package loss rate between two PoS-Signalling during the communication on SMI-XX is < 5%.	
Eu.Gen.3909	Req	The EULYNX field element Subsystem shall meet or expect the following KPI requirements at the PoS-Signalling during the communication on SDI-XX: • Data throughput according to CIR (committed information rate) with 30 kbit/s • Data throughput according to PIR (peak information rate) with 2 Mbit/s	
Eu.Gen.3908	Req	The max. allowed delay between the sender at a PoS-Signalling and the receiver at a PoS-Signalling during the communication on SDI-XX is 250 ms. The max. allowed package loss rate between two PoS-Signalling during the communication on SDI-XX is < 5%.	
Eu.Gen.3913	Head	<b>5.1.2 Interface to the Point of Power – Output (PoP-O)</b>	
Eu.Gen.3914	Info	These requirements shall be defined by national specifications.	
Eu.Gen.3915	Head	<b>5.1.3 Interface to Basic Data identifier</b>	
Eu.Gen.3918	Req	The basic data of the EULYNX field element subsystem shall be stored on a data carrier (Basic Data identifier).	
Eu.Gen.3919	Req	The Basic Data identifier shall be permanently assigned to the slot of the component of the EULYNX field element Subsystem (subsystem controller). To avoid erroneous assignments, the Basic Data identifier shall be attached to the subsystem in a manner that it remains assigned to that subsystem when a subsystem controller is replaced. Note: The implementation of the Basic Data identifier is left to the suppliers. This is not specified by EULYNX.	
Eu.Gen.3916	Head	<b>5.1.4 Local status display interface</b>	
Eu.Gen.3917	Info	These requirements shall be defined by national specifications.	
Eu.Gen.3920	Head	<b>5.2 Electrical subsystem requirements</b>	
Eu.Gen.3921	Info	These requirements shall be defined by national specifications.	
Eu.Gen.3922	Head	<b>5.3 Constructive subsystem requirements</b>	
Eu.Gen.3923	Info	These requirements shall be defined by national specifications.	
Eu.Gen.3924	Head	<b>5.4 Configuration and engineering data</b>	
Eu.Gen.3925	Head	<b>5.4.1 Generic data</b>	
Eu.Gen.3926	Req	The minimum configuration and engineering data for the EULYNX field element Subsystem is specified in Eu.SAS.1755.	
Eu.Gen.3929	Req	The PDI connection from the EULYNX field element Subsystem to the Subsystem - Electronic Interlocking shall be assigned to exactly one safe communication by configuration.	
Eu.Gen.3927	Req	The validity of the configuration and engineering data shall be determined using the checksum method.	
Eu.Gen.3930	Req	The CSS and CSNS shall be calculated with [MD5] (16 Bytes).	

ID	Type	Requirement Part 1	Requirement Part 2
Eu.Gen.3931	Head	<b>5.4.2 Data designation</b>	
Eu.Gen.3932	Info	The naming of the data files is not based on version counting, but on timestamps.	
Eu.Gen.3933	Req	The configuration and engineering data are stored in the Subsystem - Maintenance and Data Management as individual files for each instance of a EULYNX field element Subsystem.	
Eu.Gen.3938	Req	The file designations of the configuration and engineering files shall be created in accordance with the following schema:	
Eu.Gen.3937	Req	<ul style="list-style-type: none"> <li>the file name for PR_ID1 (safety-relevant data) is "SubS_ID_SRD_yyyymmdd_hhmm"</li> </ul>	
Eu.Gen.3939	Req	<ul style="list-style-type: none"> <li>the file name for CSS is "SubS_ID_CSS_yyyymmdd_hhmm"</li> </ul> <p>Note: The CSS is also loaded in the Subsystem - Electronic Interlocking.</p>	
Eu.Gen.3936	Req	<ul style="list-style-type: none"> <li>the file name for PR_ID2 (non safety-relevant data) is "SubS_ID_NS RD_yyyymmdd_hhmm"</li> </ul>	
Eu.Gen.3935	Req	<ul style="list-style-type: none"> <li>the file name for CSNS is "SubS_ID_CSNS_yyyymmdd_hhmm"</li> </ul>	
Eu.Gen.3934	Req	<ul style="list-style-type: none"> <li>the file name for the diagnostic configuration is "SubS_ID_DC_yyyymmdd_hhmm"</li> </ul> <p>Note: With this file, the data for the Maintenance and Data Management (SNMP, MIB, OPC-UA config) is provided for processing or opening the diagnostic data. No checksum is required for the diagnostic data from a safety point of view.</p>	
Eu.Gen.3940	Req	<ul style="list-style-type: none"> <li>the file name for the diagnostic configuration of the Diagnostic system is "SubS_ID_DS_yyyymmdd_hhmm"</li> </ul> <p>Note: With this file, the diagnostic data for the Diagnostic system is provided and is made available to the Diagnostic system through upload (SDI-DS).</p>
