

## GeoTiffs\_Habitat\_Classification\_Maps

### Introductory information

Each file shows the result of the DT classification into saltmarsh, tidal flat, and water of a specific tidal basin and year. The colored results are shown in the supplementary of the associated publication, Figure S5, A-B to S12, A-B.

### Methodological information

The method to generate the habitat classification maps from satellite imagery is described in detail in the method section of the associated publication.
