

This zip contains files used in the analysis of two tied studies. The first study was conducted to determine if certain values are more likely to underlie certain actions, where the second study was conducted to determine if a preselection of the most likely values lead to an easier process for the participants without limiting their freedom of expression.

**Promote\_Scores.xlsx**

This file contains the results of the first study, namely the ranking of value categories done by researchers that work with values. Furthermore it shows how the calculation performed to determine which value categories supposedly are tied to which actions.

**Value\_Elicitation\_-\_anonymized\_dataset.xlsx**

This file contains the results of the second study, where participants from the general public were asked to select a value representing the most likely reason for them to perform a certain action.

**Legend\_for\_Value\_Elicitation.xlsx**

This file contains the legend for the questions in the Value Elicitation file.

**data analysis.r**

This file contains the script used to analyse the Value Elicitation dataset.
