

Data Underlying the publication: Characterization of extracellular vesicles from
Streptococcus thermophilus 065 and their potential capacity as immune modulators.
Readme document

This excel file contains the abundances of every protein that was found in the different samples measured in this study.

Sheet 1: This sheet contains the overall normalized data, showing the differences of abundances in the proteins that were found in every sample and which had the higher abundances.

Sheet 2: Contain the overall unnormalized data

Sheet 3: Contains the phage proteins found in the different samples

Sheet 4: Contains the total protein classification

Sheet 5: Contains the ribosomal proteins found in every sample

Sheet 6: Contains protein classification id different groups

Sheet 7 & 8: Contains some differences in some important phage proteins in every group.
