

Reflexive Thematic Analysis: Thematic Structure

(SUB)THEME	REPRESENTATIVE CODES
T1. Motivations to Donate Data	
T1.1 Contributing to research (broad)	<p>"Feeling that I'm contributing to research seems cool to me, it seems important to me." (D5)</p> <p>"It feels that you're doing something good for overall society and hope it will make a difference." (D29)</p>
T1.2 Contributing to this very specific research project because I care	<p>"I feel that we have a large scope to explore how different all women are and we have always seen each other lag behind in research." (D15)</p> <p>"I learned over time that this is something that has barely been researched, like period. In like the big spectrum. So when I saw this I was immediately like oh, that sounds interesting, I want to participate in this!" (D33)</p>
T1.3 Contributing to your scientific and trusted research	<p>"It is also cool that I know you, you are my friend, and I am helping your research." (D5)</p> <p>"[The researchers] are working in a university I attended, and someone that I knew shared [the call] so I had no reason to distrust." (D13)</p>
T2. Mixed Feelings and Data Donation Experiences	
T1.1 Easy and good	<p>"It was actually quite easy because you all described it quite well on how to do it." (D33)</p> <p>"I didn't even think of it. Just downloaded [the data] and put everything up." (D22)</p>
T1.2 A bit uncomfortable, I wanted to be sure	<p>"I did have some struggles with the website from your university 'cause I had to click like a few times, but then it was surprisingly easy as well." (D29)</p> <p>"I read everything that you wrote about it. So, what you were researching. And also, there was the option to select which data you wanted to donate, and there's a possibility to withdraw at any moment." (D33)</p>
T2. Tracking and Interacting with Data	
T2.1 Only around bleeding	<p>"What makes it more accurate is that one begins to enter all the monthly information so that it is much more precise." (D7)</p> <p>"I log my menstrual bleeding in a systematic way." (D16)</p>

Reconstructing Intimate Contexts through Data Donation: A Case Study in Menstrual Tracking Technologies

T2.2 Bleeding plus	<p>“So I usually put the main things that I never forget, like my period and my skin as well because I was having a lot of acne because I stopped the pill. Then menstrual pain and energy levels and sexual activity, of course, because I don’t want to get pregnant.” (D4)</p> <p>“So whenever I start bleeding then I would probably register it and then then I sort of forget I’m on my period and then a few days down the line then I’m like OK then it was probably my last day and I also check it during the month.” (D10)</p>
T2.3 Every day, for myself	<p>“I think that’s the main reason why I stopped tracking that stuff because I was able to figure out it was my period causing this and it is not some other random thing.” (D8)</p> <p>“The apps remind me [every day], can you track your symptoms?” (D2)</p>
